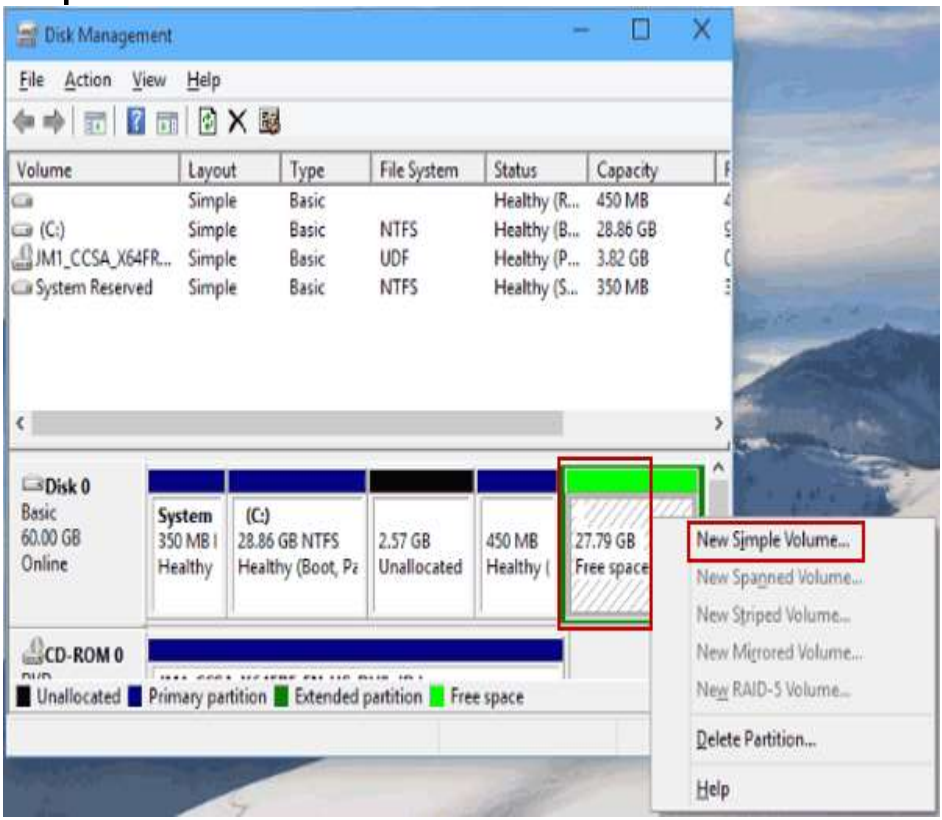
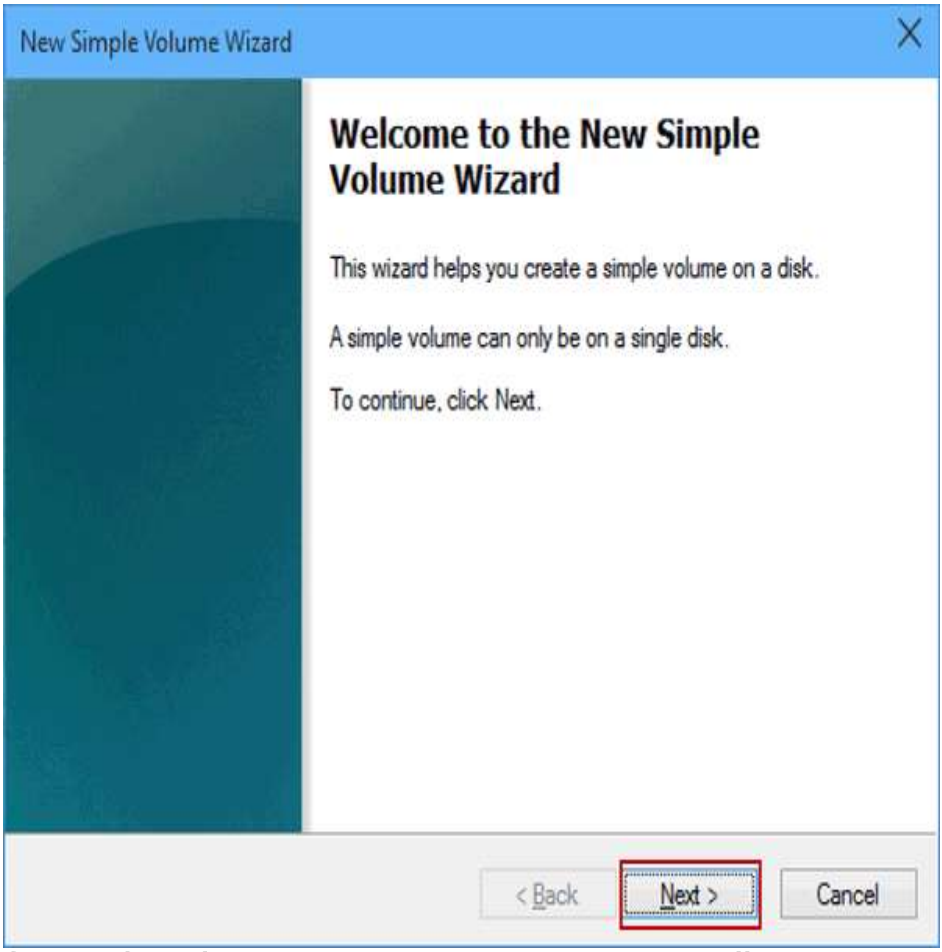
How to add a hard drive to Windows 10

Steps to add a hard drive to This PC in Windows 10:

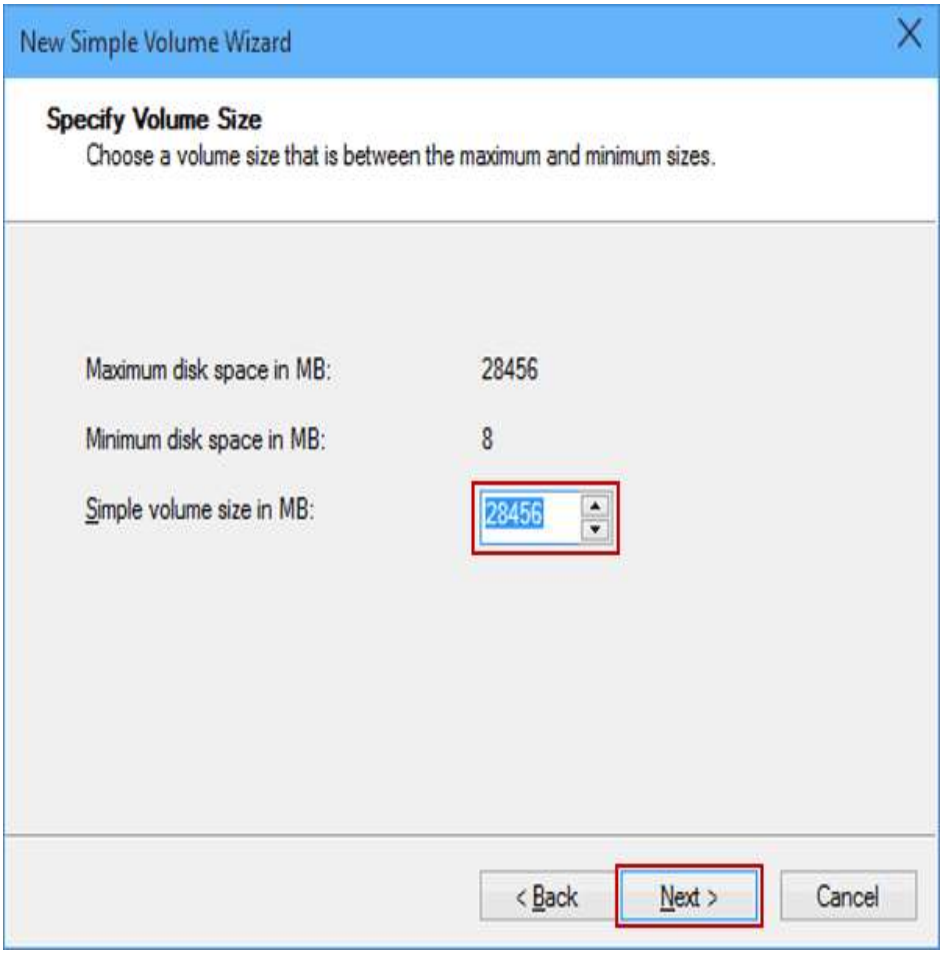
Step 1: Open Disk Management.
Step 2: Right-click **Unallocated** (or **Free space**) and choose **New Simple Volume** in the context menu to continue.



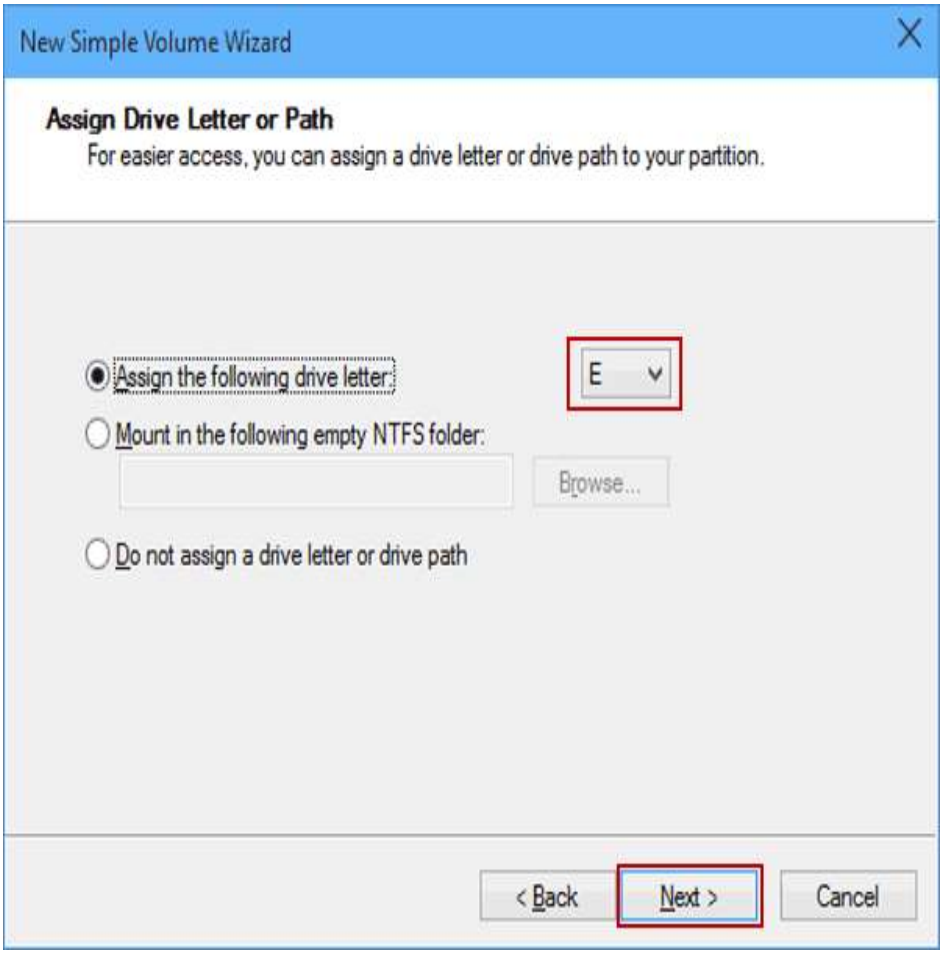
Step 3: Choose **Next** in the New Simple Volume Wizard window.



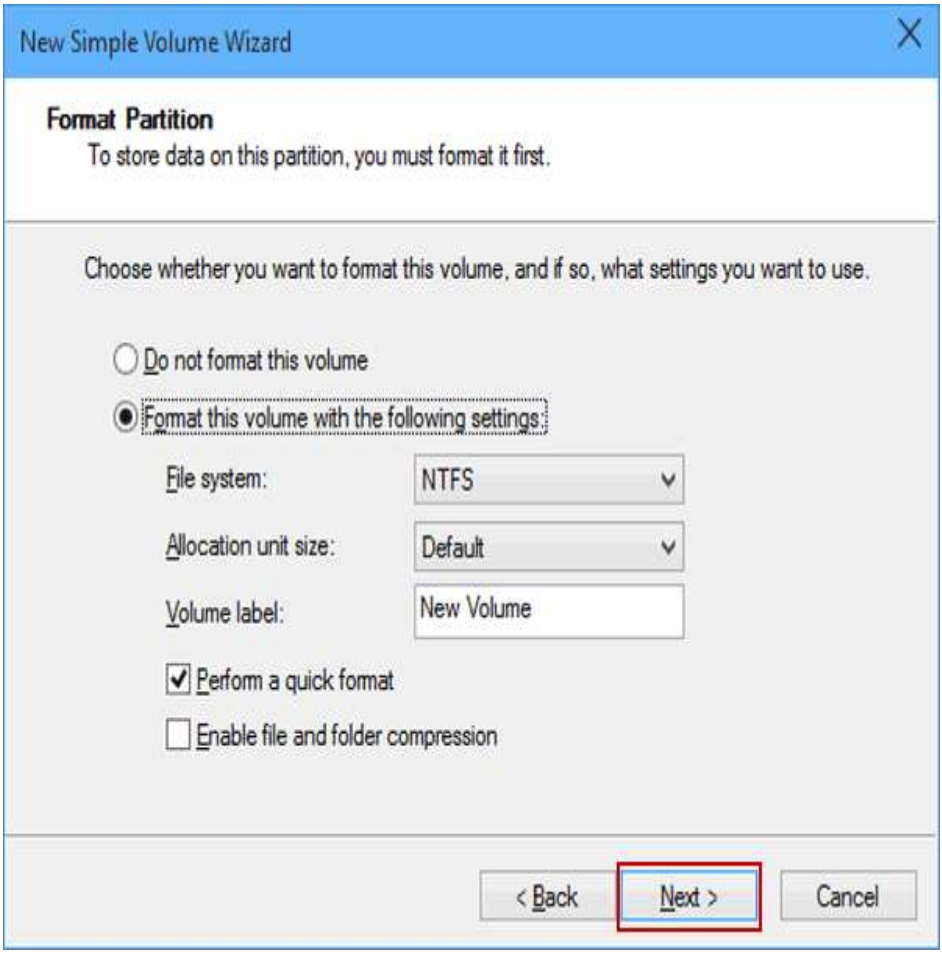
Step 4: Specify a volume size that is between the offered maximum and minimum sizes, and then click **Next.**



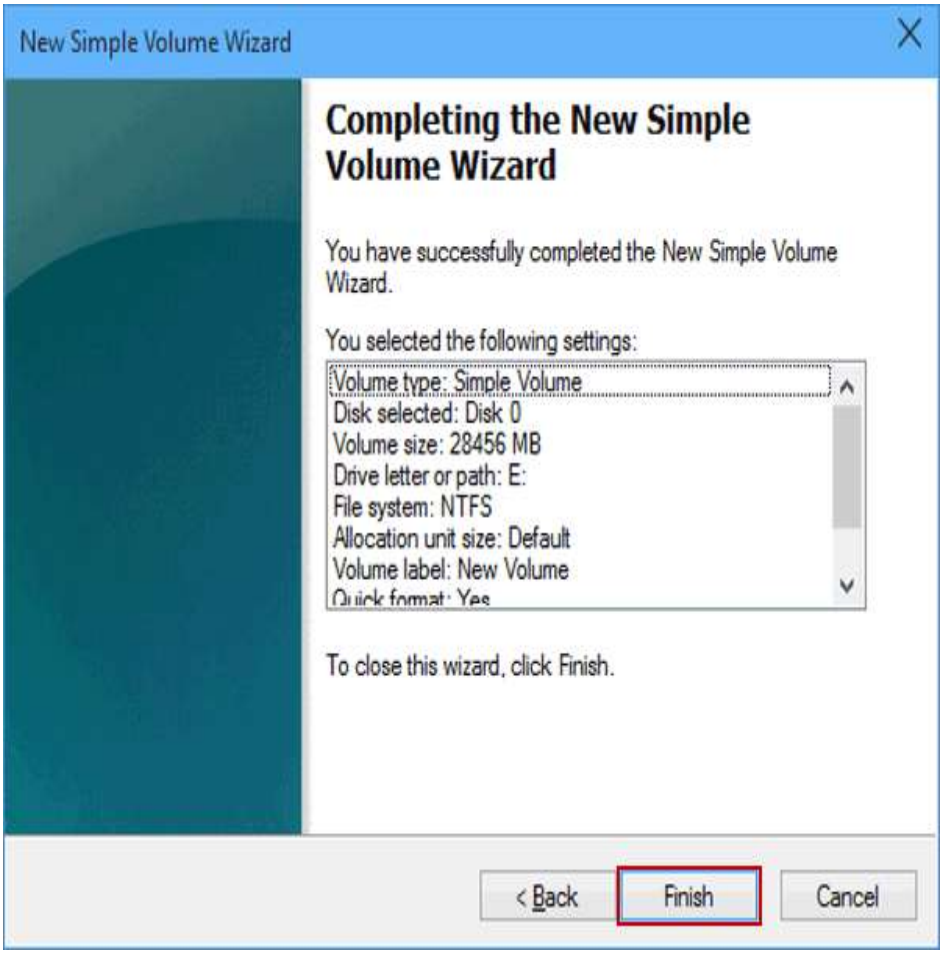
Step 5: Assign a drive letter to the new hard drive and tap **Next.**
Tip: The default drive letter assigned to the new partition is E.



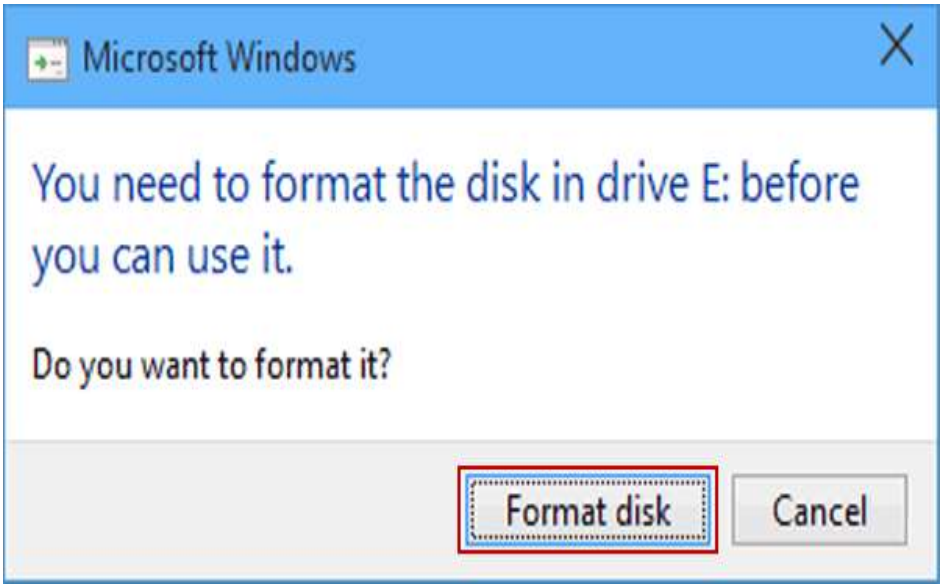
Step 6: Tap **Next** to choose formatting this hard drive.



Step 7: Hit **Finish** to complete hard drive addition and exit the wizard.



Tip: In the pop-up Microsoft Windows dialog, choose **Format disk** to go to format the new hard drive so that you can use it, such as storing data in it.



From the following picture, you can see that a new hard drive has been successfully added to This PC.
