

npm-start

Start a package

SYNOPSIS

```
npm start [-- <args>]
```

DESCRIPTION

This runs an arbitrary command specified in the package's **"start"** property of its **"scripts"** object. If no **"start"** property is specified on the **"scripts"** object, it will run `node server.js`.

As of `npm@2.0.0`, you can use custom arguments when executing scripts. Refer to [npm-run-script](#) for more details.
