git-mark-merge-base - Manually interact with depot_tools' merge-base markers.

S Y P I   N   O

> *git mark-merge-base*
> *git mark-merge-base* <commit hash>
> *git mark-merge-base* [-d | --delete]

E   IPTI   D   NR

Inspect, set or delete the current merge-base marker for the current branch. This should

not be needed, but is useful if things get into a snarled state. Pass no arguments to view the current value. If you provide <commit hash>, then   will attempt to set that as the merge-base value.

It is invalid to pick a commit which is not an ancestor of the current branch.

See [git-rebase-update(1)](#)'s description of the   configuration variable for more info on what the merge base markers are for.

SPTI   NO   O

-d

--delete

Delete the merge-base marker for the current branch.

<commit hash>

The new value to set for the current branch's merge-base marker.
