How to set up a proxy server in Edge

Edge is Windows 10's built-in web browser, and unless you tell it otherwise, it'll use your proxy configurations in Windows. The latest versions of Edge are based on Chrome, so the configuration is similar. The following steps show you how to set up a proxy from within Edge:

1. In Microsoft Edge, at the top-right corner, click the **Menu** button. Select **Settings**.

2. Scroll down to the Advanced settings section and click the **View advanced settings** icon.

3. Click the **Open proxy settings** button.
